Specsavers takes stock and upgrades

06/03/2014

By Scott Thompson

Specsavers is moving its stock checking procedures to handheld computers from Hoeft & Wessel, and also switching to the Android operating system. This will be installed in all of its stores as and when they are ready to upgrade. All new stores and refits will be offered the solution straight away.

Hoeft and Wessel worked with partner 4Court Solutions to make Specsavers' software run on the company's Allegro scanners, one of the mobile terminal designs that Hoeft & Wessel offers for 2D barcode scanning under the Android operating system or Windows Mobile/CE. "4Court Solutions understood exactly what our stores needed and the software environment we were using," says Tim Daniels, store infrastructure manager at Specsavers. "We felt the scanners were technically superior to others we tried, and the design provides a lightweight ergonomic scanning solution. It's also much more cost-effective."
